Unit 1: Community-Engaged Scientific Research

Topic 1.1: What is Scientific Research?

 Scientific research is asking a question and using a step-by-step process to collect information to answer the question.

Scientific **research** helps **answer questions**about how things work. This includes
understanding how to help people be healthy
and live the lives they want to live.

1. What are some **examples** of **scientific research helping** people?

Putting it into Action: What's the Point?

Review the Mental Health for All team's video and work together to figure out:

• What is the **research question** the Mental Health for All team wants to answer?

 What good things could happen from answering their research question?

Topic 1.2: What is Community-Engaged Research?

Community-engaged research is when people
who work at universities and people from the
community do research together.

- Community research partners who do research have an important role.
- Community members share their experiences
 and knowledge to make sure the research is
 helpful to people, accessible, and respectful.

1. Why is it **important** for **people with disabilities** to help **do research**?

2. Why **do you want** to **be part** of a **research team** or **learn** more about **research**?

Putting it into Action: Research Team Member Responsibilities

Think about the **responsibilities** of **each team member**. Read each responsibility and **decide** who **has the most responsibility** for a part of the research.

Circle or check community research partner for community researcher's responsibilities.

Circle or check academic research partner for academic researcher's responsibilities.

Sometimes both community and academic research partners are responsible for the same things. On the next page, circle both community research partner and academic research partner if they both have the responsibility.

You can also do this activity online.

Copy document

accessible and respectful	Academic research partner	
Make sure the project goes well	Community research partner	
and everyone follows the rules	Academic research partner	

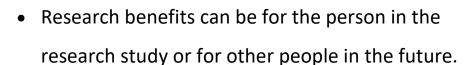

Unit 2: History of Scientific Research with People and Rules

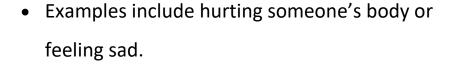

Topic 2.1: History of Research with People

Good things can happen when we do research. The good things that can happen are called benefits.

Bad things can happen to people in research. The bad things that can happen are called **harms** or risks.

Research ethics are about making sure people are treated well and that their rights are

respected when they are in research.

Research ethics are also about making sure **more** good things happen than bad things when we do research.

1. When you think about research, what pictures or words do you think about? What feelings do you have?

2. What do you think would be a **good experience** with research?

3. What do you think would be a **bad experience** with research?

4. How do you think good experiences with research studies in the past might make people feel about being in research studies now?

5. Why is it important to have rules for research with people?

Topic 2.2.1: Rules for Scientific Research with People

- Institutional Review Boards (IRB) are groups of people who make sure researchers protect people's rights and well-being.
- The Belmont principles are the values that help us think about how to treat people when they are in research. They are:

Respect for persons is about believing that
 everyone can make decisions with or without
 support. Respect for persons also means taking
 extra care of people who have a hard time making
 decisions.

 Justice is making sure all types of people can be in research and that everyone shares the good and bad things that can happen in research.

Beneficence is about making research have as many good outcomes as possible and keeping people as safe as possible.

Putting it into Action: Disability Rights and Research Rules

Talk with your team about how some of the main values in research and disability rights are similar and different.

You may think of other disability rights—you can talk about those too.

Disability Rights	Research Rules (Belmont Principles)
• Assuming people can do things	Respect for persons
and make choices	
 This includes making 	
choices that might not	• Justice
always work out or might	
be risky. This is sometimes	
called dignity of risk.	Beneficence
Having the same opportunities	
as everyone else to do things	

Topic 2.2.2: Institutional Review Boards

Institutional Review Boards (IRB) are groups of people who make sure researchers protect people's rights and well-being.

1. What does the IRB do?

• Why is what the IRB does important?

Topic 2.3: Vulnerability

It is important to be extra careful with people
 who are vulnerable. People who are vulnerable
 may have a hard time making a decision or need
 help understanding and making decisions.
 People who are vulnerable may get hurt by
 research more easily than other people.

1. What helps you understand and make decisions?

- 2. How can you help people who have a hard time making their own decisions ("vulnerable") make a choice about being in research?
 - How can we help people not feel pressured to make a decision?

3. When we include people who may be vulnerable, what can we do to include them safely?

Topic 3.1: Recruitment: Finding People to be in a Research Study

 Recruitment is the things you do to find people to be in a research study.

 To recruit people, you might talk to people at events, send emails, post on social media, or talk to self-advocacy groups.

Finding people to be in a research study

1. How did the Mental Health for All team help people understand what their study is about and what they would be asked to do?

- 2. What may **be hard** about **saying no** to:
 - A researcher you don't know?
 - Your healthcare provider?
 - A teacher or service provider?
 - A friend?

3. What helped the Mental Health for All team make sure people knew they could say no to being in their study?

How can you help make sure people know they can say no?

4. What can **you do** to help people feel they **can trust** you when you are asking them to be in your research study?

Putting it into Action: Practice Responding to "No"

- i. Practice what you will say when someone says they do not want to be in your research study.
 - ii. Write a script to help you know what to say.
 - iii. Act it out.

Topic 3.1.2 Eligibility Criteria

 Eligibility criteria are the characteristics and experiences that people need to be in a research study.

- This includes the characteristics and experiences that people must have (inclusion criteria) and must not have (exclusion criteria) to be in a research study.
- Only people who have all the characteristics and experiences on the list can be in the research study. This list is different for every study.

Putting it into action: Recruitment Flyer Search

Review Mental Health for All team's recruitment flyer on the next page.

- Circle the part that says what the study is about
- <u>Underline</u> the part that says what participants will be asked to
 do
- Highlight the parts that you think show respect to people with disabilities. Put a box around the parts that explain who is eligible to be in the study

Mental Health for All Research team's flyer is on the next page

Flyer on next page

Do you have a developmental disability? Do you also have a mental health condition?

WE WANT TO LEARN FROM YOU!

What we are doing?

 A research study about whether adding mental health services to support plans helps people get better mental health supports.

 You had mental health support added to your service plan. We want to learn about your new mental health supports.

To be in the study:

- Have a developmental disability.
- Have a mental health condition.
- Be 18 years or older.
- Live in a group home.

Mental Health for All is a team of adults with developmental disabilities lead by Ariel and Katie. To learn more

Email:

Call:

What will I be asked to do?

 Participate in a one-hour focus group and a 8 30-minute surveys.

 You can take a break, skip a question, or stop at any time.

 Everything you say is private and confidential (kept secret).

 You can receive up to \$250 for participating in the surveys and focus group.

Note: Materials are for educational purposes only and may not include all required elements.

Citation: McDonald, K. & Schwartz, A. (2023). Research Ethics for All: Accessible Research Ethics Education for Community Research Partners. Syracuse University and Massachusetts General Hospital Institute of Health Professions. www.re4all.org

Putting it into action: Practice Saying No

Practice **telling someone** they are **not eligible** for the Mental Health for All team's research study because they are **too young**.

Write out what you can say about:

- Them **not** being **able to be in** the study
- The **reasons** they **cannot be in** the study
- Anything else you might say

Topic 3.2: Finding Research Participants through Other People

 Sometimes you need to ask people like service providers and family members to help you find people with disabilities to be in a research study.

 You can work with these people to help them understand why people with disabilities might want to be in a research study and have the right to make their own choices about being in a research study.

1. **How** did the Mental Health for All team **find people** who might want to be in their research study through **other people**?

• What made it hard for them?

• What **helped** them?

Topic 3.3: Consent

Topic 3.3.1: Consent: Working with People as they Make Decisions about Being in Research

A consent meeting is when someone learns
 about a research study and decides whether to
 be in the study or not.

 Giving consent is when someone says yes to being in a study.

 Dissent is when someone decides they do not want to be in a research study.

Topic 3.3.2: Main ideas of consent: Informed, voluntary, and ongoing

 Informed: people have all the information about the study they need.

- Voluntary: people making their own choice anyone pressuring them.
- Ongoing: people can say no at any time during the study.

1. What does it mean to be **informed**?

 What information would you want to know about a research study before deciding to be in it?

2. What does it mean to make a voluntary choice?

3. What does it mean that being in a research study is an ongoing decision?

4. What are some **signs** that **someone changed their mind** and **does not want to be** in a research study **anymore**?

Topic 3.4: Consent Capacity

 Consent capacity is someone's ability to make their own decision about being in research.

- Consent capacity can change.
- How much consent capacity someone needs to make their own decision will depend on the bad things that can happen in the study.

 We can make information about our research more understandable so more people can understand the good and bad things for themselves about being in a research study.

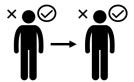

1. What can you do if you're not sure if someone can make their own decision to be in a research study?

Topic 3.5: Assent: Working with Guardians and Parents of Children

Main ideas

- If someone does not have consent capacity, they need a legally authorized representative, or LAR, to decide if they can be in a research study.
- Assent is someone with a legally
 authorized representative (LAR) saying or
 showing with their body that they want to
 be in a research study.

1. How can you help someone with an LAR make their own decision?

2. What signs might tell you that someone might not be able to make their own decision about being in a research study?

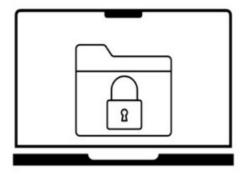

Putting it into Action: Working with Guardians

Practice what you would do.

A participant has a guardian and uses pictures and body movements to communicate. They gave assent to do the study by picking the "yes" picture. Their guardian wants them to do the study. After about 30 minutes of an interview, you notice that they are turning away from you and walking around a lot.

Topic 4.1: Risks and Safeguards
Topic 4.1.1: Introduction to Risks

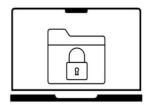

- It is important to keep people safe in research.
- Researchers have to balance the good
 (benefits) and bad (harms or risks) things
 that can happen to people when they are in research.

- Every research study has different good and bad things that can happen.
- The good and bad things might also be different for different people in a research study

 Safeguards are the things researchers do or use to keep people safe when they are in research.

1. What are some risks that you think could happen in research?

Topic 4.1.2: Physical and Psychological Risks and Safeguards

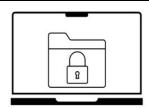

Main idea

 Physical risks are about your health or how your body feels.

 Psychological risks are about how people feel.

 Safeguards are the things researchers do or use to keep people safe when they are in research.

1. Who may have a hard time talking about mental health with the Mental Health for All team?

• What experiences or feelings might be hard to talk about?

How can you help someone who has a hard time talking about their feelings or experiences?

Topic 4.1.3: Social Risks and Safeguards

 Social risks are bad things that can happen related to other people.

 Social risks can include how people think about and treat you. They can also include changes in how you feel about other people.

Putting it into Action: Being Clear

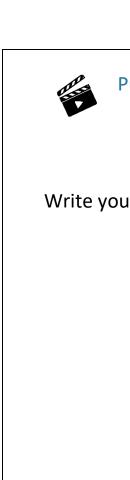

You are doing a research study that will ask people to do

4 interviews over 4 months. You worry some people will be sad
about the study ending and not getting to talk to you anymore.

Practice explaining how many times you will see participants during the study and what will happen when the study ends.

Write a script to help you talk to the participant. Explain:

- How many times you will see each other while you are doing the interviews
- What will happen when you are done doing the interviews:
 - You will probably not see each other after the interviews end.
 - What will you do with the information they shared with you?
- Think about how you will say goodbye in a way that makes them feel like you will not forget about them.
- Explain what will happen if you see each other in the community. Remember everything you learned about keeping people's information private and confidential.

Putting it into Action: Being Clear

Write your script to talk to the participant about the study ending.

Topic 4.1.4: Legal and Economic Risks

• Legal risks are about the law.

• Economic risks are related to money.

Topic 4.1.5: More information about risks and safeguards

- If something very stressful happens during research, it may be important to debrief.
- Debriefing means talking about what happened and why.

 An adverse event is when someone is hurt in research in a way you weren't expecting them to be hurt.

Risks and Safeguards for the Mental Health for All team's study

1. What are some possible risks or harms in the Mental Health for All team's study?

What can they do to make sure people stay safe in research?

Topic 4.2.1: Privacy and Confidentiality

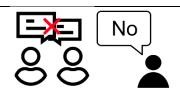

Privacy and confidentiality is about keeping research participants' information (data) safe so other people don't have research participants' information.

- Keeping people's information private and confidential is important in research.
- Researchers keep people's information
 private and confidential before, during,
 and after people are in a research study.

 You cannot share information you learn about research participants with anyone who isn't on the research team.

 We usually do research in private places to make sure information stays private and confidential.

Putting it into Action: "That's confidential!"

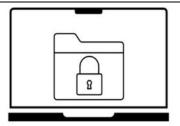

Practice **explaining** to a family member or a friend **what** you **can** and **can not share about** the **research** study and the people in it.

You can write a script to help you **explain what** you **can** and **can not** share about the study. Then, act it out.

Topic 4.2.2: Privacy and Confidentiality when Other People are Present

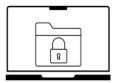

- Researchers also need to think about
 privacy and confidentiality when
 participants bring someone with them.
- Other people do not have a right to know research participants' information.
- You can ask your project leader for help
 when you are not sure what to do about
 something the person the research
 participant brought with them says or does.

1. What are some concerns or challenges the Mental Health for All team might have about how they will keep research participants' information private and confidential?

 How can they keep research participants' information private and confidential?

Putting it into Action: What does Privacy and Confidentiality Look Like?

Describe, write, draw, or act out what **privacy** and **confidentiality looks like** when you are collecting information from participants in a research study.

- What would the room look like where you are collecting data?
- Who would be there?
- What could you do or use to keep research participants' information private and confidential?

Topic 4.2.3: Privacy and Confidentiality when Sharing about Research

- Researchers need to keep information private and confidential when they share about research.
- It is important to not share research
 participants' names or other information
 that could let someone figure out who they
 are.

Topic 4.3: Breaking Confidentiality and Mandatory Reporting

• Mandatory reporting means if researchers learn that a research participant is being hurt or abused, they have to share the information with authorities (people who can stop other people from being hurt). Researchers also have to share information if they found out a research participant is hurting or abusing someone else.

 Mandatory reporting means you cannot keep information private and confidential if you find out someone is being hurt or hurting someone else.

- Mandatory reporting helps people be safe.
- Mandatory reporting can be hard. Your project
 leader can help you learn more about mandatory reporting.

Unit 5: Community Research Partner Rights

Topic 5.1: Keeping Community Researchers Safe

 Your safety as a community research partner is important.

- Your team can plan for what you will do if a community research partner is hurt doing research.
- Your project leader can help you if you are hurt as a community research partner.

- 1. What do you think could happen during the research that might make the Mental Health for All community research partners feel unsafe or uncomfortable?
- What can they do if that happens?

Topic 5.2: Being an Author and Sharing Findings

	 Authors are people who share about a research study and are responsible for the research.
	Authors get credit for doing the research.
	When someone is an author on a research
	paper, video, brochure, poster, or presentation,
	it means they had an important role in the
	research.
• ~	If you are part of a research team, you might
	have the right to be an author.
	It's important to talk with your project leader
	about who will be an author .
<u>L-1</u>	You can talk about who will be an author at the
	beginning, middle, and end of working together
	on a research team.

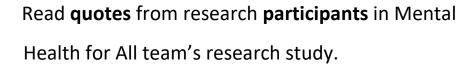

- When we share about research it's important to use words and ideas that are respectful.
- This can help other people learn about how to respect people with disabilities.

- It is important to reflect, or think about what
 you do as a researcher.
- If we think about how things went, we can make them better for next time.

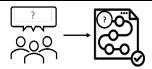

- <u>Underline</u> or <u>highlight</u> the parts of the quotes that could give away who the participants are.
- How can you change the quotes so no one can figure out who the participants are?

Participant quotes

- "I don't have anyone to talk to about my mental health at my group home, Crystal Springs. It is really hard to keep these things in my head."
- "When I used to talk to a therapist, I felt a lot less sad, but I don't get to talk to them anymore."
- "When I was a student in Ms. Bailey's class in 2015 and turning
 22—my birthday is June 5!--I talked to Jamal at The Arc, they told me about getting therapy. I wish I had someone to talk to about my mental health."
- "I am really happy my friends Melissa and Paul from my job at the CVS on Main Street told me about getting a therapist. Talking to a professional helps me work through my tough emotions and makes me happier each day."
- "I am too busy at New Horizons and being the secretary of People
 First Chapel Hill to add another thing to my week."
- "I already see so many therapists every day, why do I need another?"

Topic 5.3: Wrap Up

 Scientific research is asking a question and using a step-by-step process to collect information to answer the question.

In community-engaged research, community research partners share their experiences and knowledge to help make research questions that matter to people with disabilities, and do research that is accessible and respectful.

Research ethics are about making sure people
are treated well and that their rights are
respected when they are in research.

 Research ethics can help make sure bad things don't happen when people are in research.

 Institutional Review Boards (IRB) are groups of people who make sure researchers protect people's rights and well-being.

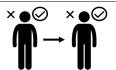

- Eligibility criteria are the characteristics and experiences that people need to be in a research study.
- Only people who have all the characteristics on the list can be in the research study. This list is different for every study.
- Consent must be:

- Informed: people have all the information they need about the study.
- Voluntary: people making their own choice without anyone pressuring them.
- Ongoing: people can say no at any time during the study.

 We often get assent from people when they have a legally authorized representative (LAR). Assent is when someone with a LAR says or shows with their body that they want to be in the research study

Main ideas

 We work together with our team to have safeguards. Safeguards are the things we do or use to keep people safe in research.

- Keeping information private and confidential is really important in research.
- We keep information private and confidential before, during, and after the research study.

• Mandatory reporting means if researchers learn that a research participant is being hurt or abused, they have to share the information with authorities (people who can stop other people from being hurt). Researchers also have to share information if they find out a research participant is hurting or abusing someone else.

- Your safety as a community researcher is important.
- Your team can plan for what you will do if a community research partner is hurt doing research.

 Authors are the people who share about a research study.

 If you are part of a research team, you may have the right to be an author.

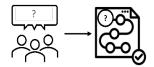

• It is important to reflect, or think about what you do as a researcher. If we think together about what we do we can help keep participants safe and respect their rights.

Certification

Individual Certification

To receive a certificate that says you have completed the training, do these certification with the person who helped you do the Research Ethics for All training. It is ok to re-watch a video, ask for help, and use your workbook to help you do some of the activities.

 Describe, write, draw, or act out a definition of scientific research.

Describe, draw, write, or act out 3 ways
 community research partners can help with
 research studies.

Describe, write, draw, or act out 1 or 2 reasons why we have rules for research .
 Describe 1 way you can respect people's rights in research.
researen.

☐ Describe 2 ways you can **keep people safe** in research.

If someone is considered vulnerable, we need to pay extra attention to how we do research with them.
 What are 2 things you can do to help respect someone who is vulnerable is research and keep them safe?

Review the Mental Health for All team's **eligibility criteria** on the next page.

Decide if each **person can be in** their **study**.

Circle or highlight the parts that match the eligibility criteria.

Cross out the parts that do **not match** the eligibility criteria.

- Sally is 19 years old. She has Down syndrome. She just moved to a new group home 2 months ago. She calls you on the phone to say she saw your flyer. She is really interested in learning more about your study.
- O John is 30 years old. He is autistic and has lived in a group home for 3 years. He loves it there and hopes to live there for a long time. John uses pictures and short phrases to communicate. You meet him at a self-advocacy conference and he says he is interested in knowing more about the study.
- Taylor is 42 years old. She has an intellectual disability. She has lived in a group home 5 years and speaks only Spanish.

Including Mental Health Services in Support Plans

Eligibility criteria:

Inclusion criteria- the experiences and characteristics people need to be in our study

☐ 18 years or older
☐ Have a developmental disability
☐ Live in a group home
☐ Can share their thoughts and feelings
using words, pictures, or signs

Exclusion criteria-the experiences and characteristics of people who can **not** be in our study

Have lived in a group home for less than 1 year
 Plan to move to a new place in the next 6 months
☐ Does not understand English

☐ Sort the pictures into "it looks like they consent" and "it looks like they do not consent (dissent)."

Card sort link

Click "make a copy"

Copy document

Would you like to make a copy of Consent or Dissent??

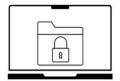

Describe 3 ways you can keep participants'information (data) private and confidential

1.

2.

3.

☐ Sort the information about participants into the categories: "confidential" and "not confidential."

Card sort link

Click "make a copy"

Copy document

Would you like to make a copy of Consent or Dissent??

Sometimes we have to break confidentiality to keep research participants safe. This is called mandatory reporting. What is 1 thing that participants might talk about that you would have to share with someone else?

Congratulations on completing Research Ethics for All!
As you keep doing research you will learn more about research ethics.
Talk with your team members or project leader about the things you still want to know about being a community research partner.
